Re: Eye Airfield Wind Turbines – Planning ref: 3736/11

Dear Sirs,

I wish to **SUPPORT** this planning application because:

- Climate Change is the greatest threat facing our planet. We need renewable technology solutions, such as this proposed wind farm, to tackle Climate Change and Global Warming.
- The two turbines would provide electricity for around 3800 homes.
- Wind power is clean. It doesn't produce emissions of acid rain gases, carbon dioxide or particulate matter.
- Wind power is truly sustainable. Oil, coal, gas and uranium all eventually run out.
- Wind power works! Several European countries already generate over 20% of their electricity from wind power. The UK needs to catch up.
- The UK wind power industry will create thousands of jobs. Many engineering skills used in the declining UK oil and gas industry are transferable to the growing wind power industry.
- It helps reduce the need for new expensive nuclear power stations that leave a toxic legacy of radioactive waste that remains dangerous for tens of thousands of years.
- The UK has the best wind resource in Europe. This proposal exploits that resource.
- Wind power is popular with around 80% of the public in support.
- It is often claimed that wind farms damage tourism when in fact they often act as tourist attractions.
- Wind power is part of our clean, green energy future.

Yours sincerely,

.....
